SOME GREEN TEAS ARE BAD FOR HEALTH !

- ◇ Bi-carbonates are added to sustain the green color.
- ◇ Very few are truly Organic certified.

Beeline Organic Green Tea is cultivated on the mountain slopes of Japan's Mie Prefecture, known the world over as a tea growing region for the past 100 years.

1. Use of pesticides is prohibited.
2. The soil here has never been tainted with chemical fertilizers.
3. Grown on lush pristine mountain slopes, promoting a natural run-off irrigation, thus maintaining the reputation of this superb crop.

Harvesting

Beeline Organic Green Tea is harvested twice a year --- once in spring and once in summer. Immediately after the crop is harvested, the leaves are steam cleaned at a controlled temperature. Unlike most green tea available in the market, the leaves that go into Beeline Organic Green Tea are never subjected to any forms of chemical wash.

Japan is the only country in the world that is permitted to produce Organic Japanese Green Tea.

Processing

After the steaming process, the leaves are dried and undergo a compression process.

This coaxes the delicate aroma to manifest itself from the leaves.

The leaves are then subjected to micro pulverization, resulting in its final state of a fine powder of 20 microns.

This allows the tea to become fully soluble in water whilst maintaining the flavor and quality of Beeline Organic Green Tea, delivered to you in its original flavor with maximum health benefits.

Certification

Beeline Organic Green tea is certified Organic by respectable independent Organic bodies globally in compliance with their stringent certification standards.
